

Quantum Mechanics

Lecture Series by Dr Prince A Ganai

Btech - Course

Department of Physics NIT Srinagar

Lecture 01

Introduction to Quantum Mechanics

Classical Physics

Laws of Motion and Theory of Electromagnetism

Most Important Idea : Deterministic world

**"Why I
Accidentally Started
Quantum Mechanics"
- Max Planck**

47

This classical picture began to crumble in 1900 when Max Planck published a theory of black-body radiation

Conceptual Black Body

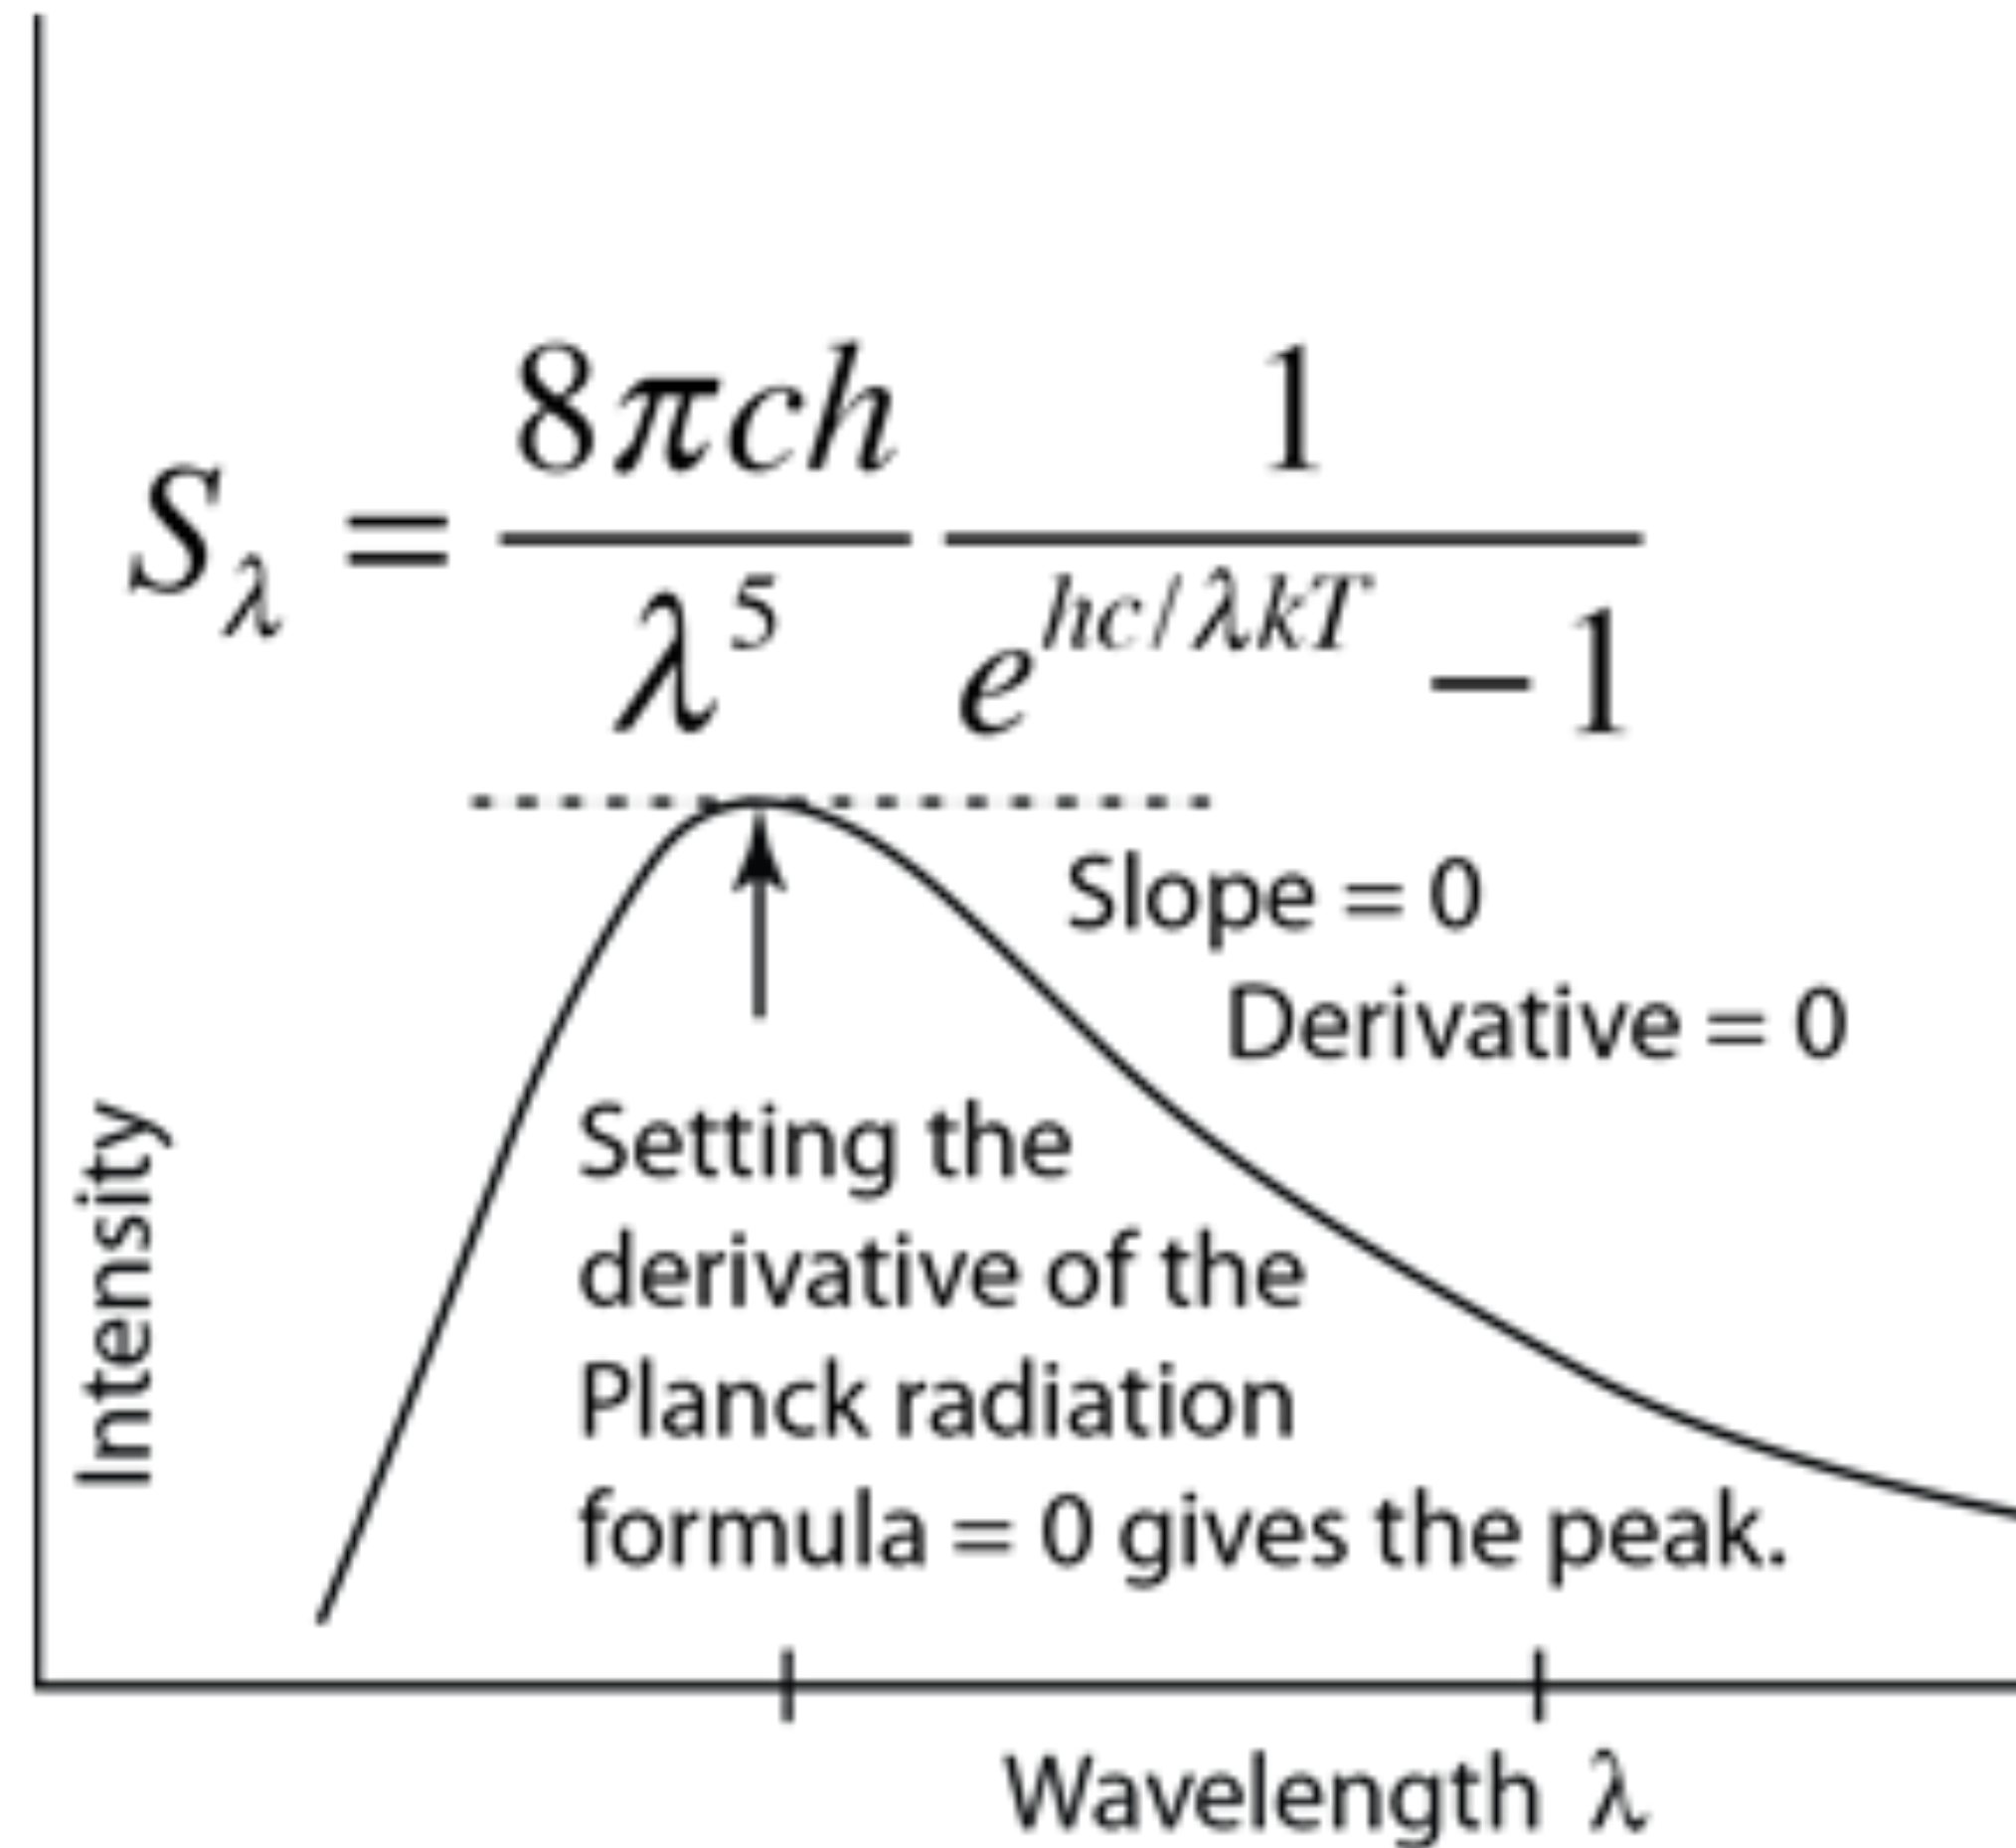

Planck relation:

$$E = h\nu = \frac{hc}{\lambda}$$

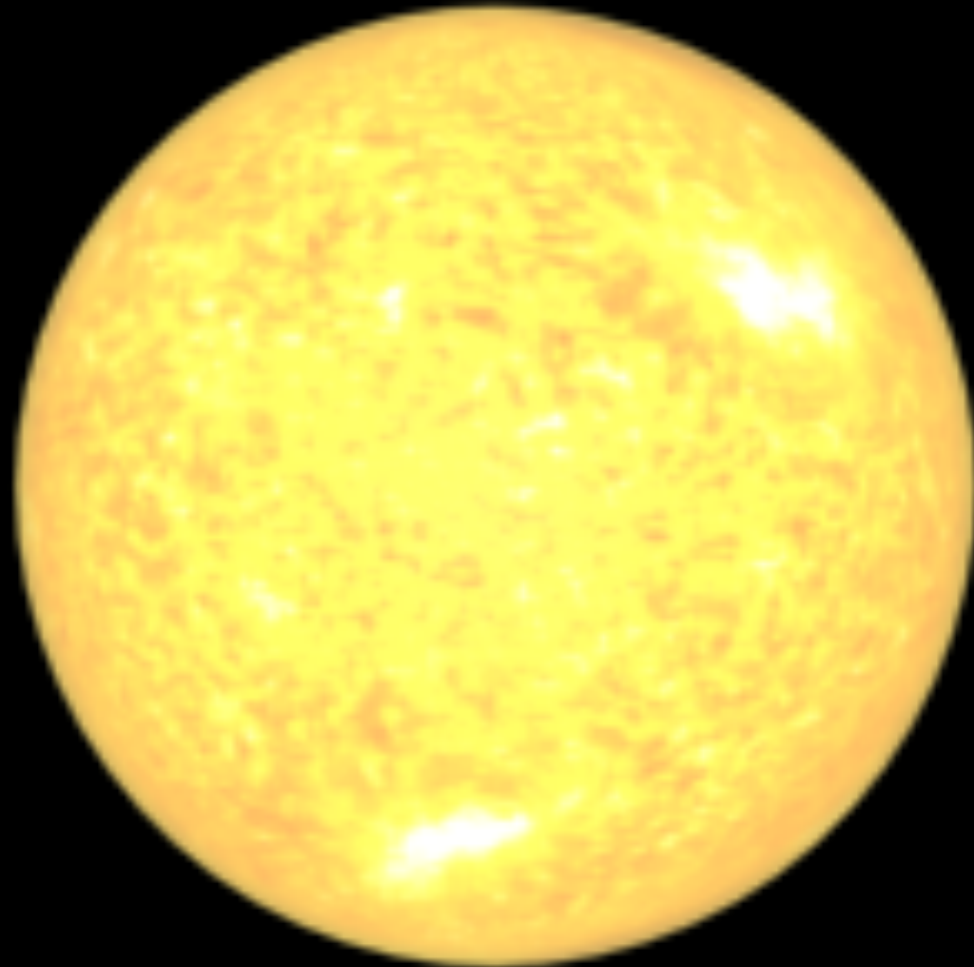

where:

E = energy
 h = Planck constant
 ν = frequency
 c = speed of light
 λ = wavelength

Let $a = \frac{hc}{k}$

and note that the constant term does not affect the peak.

Colors are exaggerated

Photons

Compton scattering

Photo electric effect

Matter as Waves

$$\lambda = \frac{h}{mv}$$

Note: v is for velocity and not for frequency as shown before.

Louis de Broglie

Electron Diffraction
